

Evapotranspiration: OpenET

Integration with precipitation
and irrigation status data

Calculated Irrigation Depth

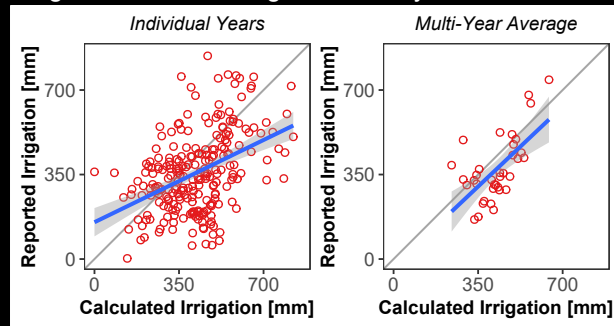

Fields:
Compare to farmer data

Water right groups:
Compare to flowmeters

Management area:
Compare to total for
all flowmeters in area

ET-based irrigation calculations agree best with reported irrigation when averaged to multi-year timescales.

Uncertainties for ET-based irrigation calculations include:

- Year-to-year soil moisture changes
- Effective precipitation calculation
- Linking well locations to fields
- Selection of ET algorithm
- Uncertainties in other datasets
